

Wesley Kamotho – DCS-03-8392/2023

Illustrate how Management Information Systems (MIS) are applied in business organisations.

- Decision making – through MIS, managers can make informed decisions as they get timely and reliable information.
- Data management – MIS ensures data is collected, stored, processed and retrieved securely and efficiently.
- Efficiency in operation – MIS streamlines business operation ensuring efficiency.
- Communication – MIS enhances an organisation's communication by providing avenues for data sharing and collaboration.
- Strategic planning – MIS supports long-term strategic planning through reliable information.

Identify six components of a Decision Support System (DSS)

- Data Management
- Communication and networking
- Inference engine
- Knowledge base
- Model management
- User interface
